

Sagacent Technologies Moves Up in the MSSP 250 List

Santa Clara, CA, November 30, 2023—MSSP Alert tracks the world's top managed security services providers and publishes a list of the Top 250 MSSPs every year.

Sagacent Technologies has made this global list for the second time—and achieved a higher ranking in 2023. Very few on the list are in California, and almost all are much bigger companies. Along with the listings, MSSP Alert includes research reports on the managed security service providers (MSSPs) they include. Here's what they had to say about Sagacent: "Sagacent Technologies only works with businesses with highly confidential data; have clients, vendors, or regulations demanding that they demonstrate that they are following recognized best security practices; or just don't want to send their clients a notice that their data was accessed by hackers. Therefore, every Sagacent client is managed and secured by the most appropriate cybersecurity framework. When a cybersecurity framework is not specifically required, Sagacent defaults to following the Center for Internet Security's CIS v8."

Sagacent CEO Ed Correia notes, "Everybody acts like they just discovered frameworks this year. We started using them in 2016. In 2018, we fired clients that wouldn't use them to secure business. Since we've only added to our cybersecurity services this year, we expect to continue moving up the MSSP ranking in years to come."
